2007 California Wheat Variety Survey

Overall 2007 wheat plantings were 23% higher than 2006. Total estimated planted acreage is estimated at 608,000 acres for California, versus 495,300 acres last year. This year saw the emergence of several new varieties across all classes of wheat grown in California. White, red, and durum wheat classes all showed increased plantings at levels of 19%, 22%, and 35%, respectively. Much of this increased planted acreage is attributed to higher wheat prices at planting. However, due to drought, planted acres were greatly reduced in Eastern Riverside County and much of the dryland wheat in the southern Central Valley was losted *after* planting.

CALIFORNIA'S RED AND WHITE WHEATS:

Hard Red wheat still remains the predominant class of wheat grown in California although the most commonly planted wheat variety, Blanca Grande, is a Hard White wheat variety planted predominately in the San Joaquin Valley. Approximately 24% of all non-durum wheat planted in the state was Blanca Grande. Second largest acreage was planted to PR 1404, a hay/forage red wheat variety. The variety Summit was a close third with approximately 79,000 acres planted.

DESERT DURUM[®]:

In the Imperial Valley, Kronos and Orita remain the top planted varieties. Other predominant varieties in Imperial include the newer varieties Desert King and Havasu. In the San Joaquin Valley, the variety Platinum lead the way for the 2nd year in a row with the vast majority of planted acreage (~21,000 acres). Second largest acreage planted in the San Joaquin Valley was the introductory variety RSI 64.

Note: This report reflects wheat that was planted in the fall of 2006/early winter 2007 for harvest in spring/summer of 2007. This survey is an estimate of the state's planted acreage.
